

# METAZYNC

## **Task Title:** Cleaning Service Management System with Admin Panel (CRUD)

### **Overview**

Create a web application where users can book cleaning services and manage their bookings. The admin panel will allow administrators to oversee bookings and manage service offerings.

### **Time Duration - 2 Days from Received Date**

### **Core Features**

#### **User Functionality:**

##### **1. Book a Cleaning Service:**

- Add a booking with fields like:
  - Customer Name
  - Address
  - Date and Time
  - Service Type (dropdown: e.g., Deep Cleaning, Carpet Cleaning, etc.).

##### **2. View and Manage Bookings:**

- List all bookings made by the user.
- Edit or cancel a booking

### **Technical Requirements**

#### **Backend:**

##### **● Endpoints for Users:**

- GET /bookings: Retrieve all bookings for the logged-in user.
- POST /bookings: Add a new booking.
- PUT /bookings/:id: Update a specific booking.
- DELETE /bookings/:id: Cancel a booking.

##### **● Database Schema(Sample) :**

- **Booking:**
  - id (auto-generated)
  - customer\_name (string, required)

- address (string, required)
- date\_time (timestamp, required)
- service\_id (foreign key)
- user\_id (foreign key).
- **Service:**
  - id (auto-generated)
  - name (string, required).
- **User:**
  - id (auto-generated)
  - username (string, unique)
  - password\_hash (encrypted string).

## Frontend:

- **User Pages:**
  - **Dashboard:** List all bookings for the logged-in user.
  - **Booking Form:** Add or edit a booking
- **Tools:**
  - Use React with Material UI or Tailwind CSS for simplicity.
- **Additional**
  - Add the validation for required fields.

## Submission Guidelines

1. **GitHub Repository:**
  - Include a README with:
    - Setup instructions.
2. **Deployment (Optional):**
  - Deploy to **Vercel** or **Netlify**.
3. **Submission:**
  - Share the GitHub link to [careers@metazync.com](mailto:careers@metazync.com).

## Evaluation Criteria

1. **Code Quality:** Clean, readable, and well-documented code.
2. **Functionality:** All CRUD operations and features must work as described.
3. **UI/UX:** Simple, clean, and responsive design.
4. **Completion:** Must implement the core features within the given time.
